トピックを探す (1) Keyword search

- 基本検索(キーワード、全文)
- 絞り込み(年月日、出版物、資料タイプ)

The screenshot displays the Gale Academic OneFile interface. On the left, there is a search bar with the text '検索' and a magnifying glass icon. The main content area shows search results for the keyword '検索'. The results list includes article titles, authors, and publication details. Two red circles are drawn on the page: one around the search bar area and another around the '絞り込み' (Filter) section on the right, which contains various filters for refining the search results.

Abstract:

Background

Acute myeloid leukemia (AML) is one of the most common blood cancers, and is characterized by impaired hematopoietic function and bone marrow (BM) failure. Under normal circumstances, autophagy may suppress tumorigenesis, however under the stressful conditions of late stage tumor growth autophagy actually protects tumor cells, so inhibiting autophagy in these cases also inhibits tumor growth and promotes tumor cell death.

Methods

AML gene expression profile data and corresponding clinical data were obtained from the Cancer Genome Atlas (TCGA) and Gene Expression Omnibus (GEO) databases, from which prognostic-related genes were screened to construct a risk score model through LASSO and univariate and multivariate Cox analyses. Then the model was verified in the TCGA cohort and GEO cohorts. In addition, we also analyzed the relationship between autophagy genes and immune infiltrating cells and therapeutic drugs.

Results

We built a model containing 10 autophagy-related genes to predict the survival of AML patients by
